# INSTALL GUIDE

# Reflecta-GDI™

## GARAGE DOOR INSULATION

### CORRECT INSTALLATION METHOD FOR REFLECTA-GDI™

Each pack will cover a standard 16 panel double garage door.

**STEP 1** Wipe down the inside with a rag and a little methylated spirits.

**STEP 2** Measure the panels and cut your insulation to shape and size of the door panel.

**STEP 3** Lay the prepared insulation down with the green side facing you. Do one panel at a time.

**STEP 4** Secure the double-sided tape on the corners of the cut insulation but do not peel the outer side of the tape just yet.

**STEP 5** Silicon around the perimeter and up and down the middle of the door panel.

**STEP 6** Carefully place the Reflecta-GDI™ insulation into the prepared door panel, silver side facing you. Make sure that the insulation fully covers the entire area and none of the garage door panel is showing.

**STEP 7** Peel back the outer side of the double-sided tape and secure to the door panel.

**STEP 8** Tuck the edges of the Reflecta-GDI™ insulation into the lip of the panel. Working from the centre out, run your hands along the whole panel pushing down on all the edges to ensure an even finish.

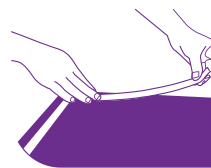

### WHAT YOU WILL NEED

-  Utility knife
-  Double-sided tape
-  Industrial grade silicone

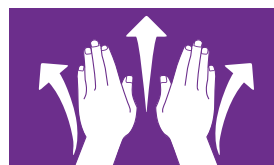

### APPLICATION HELP

Double-sided tape application    Silicone application

Install Reflecta-GDI™ application
